

ACT open account verification

QUICK REFERENCE GUIDE — CUSTOMER SUCCESS · FULL SOP: SOP-CS-001

1. Open ACT. Click **Lookup** → **All Contacts** → **Record Manager**.
2. Scroll to **OPEN**, select them all, click **Lookup Selected**, then sort by **Last Order Date** (most recent first).
3. Click **Export Current List to Excel**. Add columns: **Status**, **Note**, **Check-in 1**, **Check-in 2**.
4. Research each contact briefly — Google listing, company website, ACT notes, Shopify account.
5. Call every number on the ACT record. Opener: *"Calling from DSS — we haven't ordered in about two years, is the business still open?"*
6. Confirmed closed → log in ACT in **large, bold, red** as **Completed, customer confirmed, closed**. Set ACT Status = Closed. Excel Status = Closed (red).
7. Business sold → get new owner's name and phone. If ACT already has that account, close the old one. If not, capture details as a new lead.
8. Confirmed open → log in ACT in **large, bold, green** as **Confirmed still in business**. Excel Status = Open (green). Offer password reset.
9. No answer week 1 → leave voicemail. Excel Status = Unsure (yellow). Note attempt in **Check-in 1**.
10. Week 2 → call again and send cleanup email with a hard two-week Friday deadline. Note in **Check-in 2**.
11. Week 3 → if no reply by the deadline, mark Closed (red) in ACT and Excel. Log the closure call.
12. End of Friday → send the Sales Lead: hours worked, accounts contacted, confirmed closed, confirmed open, carried to next week.

COMMON MISTAKE

Working only in ACT. Juan removes Closed contacts each week, so without the parallel Excel tracker the weekly numbers report cannot be reconstructed.

SHORTCUT

Keep three prepared copy-paste blocks — Closed (large bold red), Open (large bold green), Unsure (large bold yellow). Paste, do not re-format every time.

TIP

If a contact says they sold the business, get the new owner's name and phone before hanging up. That lead is worth more than the closure itself.

If unsure of any step, see full SOP-CS-001.
