

CSV bulk order entry for wholesale accounts

QUICK REFERENCE GUIDE — CUSTOMER SUCCESS · FULL SOP: SOP-CS-006

1. Download the CSV from the DSS Info email; confirm PO number and ship-to address.
2. Open **Shopify > Applications > Order's up! > Single order**. Drag the CSV onto **Upload or Drop file here**.
3. Confirm header mapping: **sku** → **SKU**, **qty** → **Quantity**. Click **Auto map** if blank.
4. Review the Order Preview. Flag any row where stock is negative, Unknown, or barcode is N/A.
5. Open the Production File (Public > Emna > **Production File – Emna**). Refresh, then **Ctrl + F** each flagged SKU. Check if we have unfinished goods.
6. Highlight confirmed quantities in the Excel file. Mark partial fills and missing SKUs in a distinct colour.
7. Click **Create Draft Order > View order**. Verify customer, shipping address, PO number, tags, and quantities.
8. In the draft, click **x** to delete unmatched lines. Use **Add product** to search the correct variant by name and province, then **Add**.
9. Edit quantities down to what we can actually ship. Never invoice a quantity that is not in stock.
10. Email the invoice. List every not-invoiced or partially-invoiced SKU with the reason on the same email.
11. Log shortages in **Teams > DSS – Sales Hub > Missing Opportunities** so the follow-up sale is not lost.

COMMON MISTAKE

Trusting the Shopify stock column. Shopify does not always reflect real-time availability — always cross-check against the Production File before confirming the line.

COMMON MISTAKE

Invoicing a quantity we cannot ship the same day. Mixed liquid is not ready inventory — it must be bottled and stamped. Tell the customer same-day is not possible and offer next-day.

TIP

Use a personal copy of the Production File so a save conflict doesn't block David while he is editing the master. Refresh the personal copy before reading numbers.

SHORTCUT

Flamingo SKUs missing the province code show up as N/A barcode or Unknown stock. Delete the broken line, then search by product name plus province (for example "Riot Blue Burst 60ml MB 3mg") and tick the

correct variant.

If unsure of any step, see full SOP-CS-006.
