

Refund process for e-transfer payments converted to credit

QUICK REFERENCE GUIDE — CUSTOMER SUCCESS · FULL SOP: SOP-CS-009

1. Confirm the credit is warranted (out of stock, batch issue, fulfilment shortfall, or warehouse-approved adjustment).
2. Open the order in **Shopify** using the DSS order reference.
3. Click **Refund / Credit** and add the affected line items with exact quantities.
4. Enter a specific refund reason: **Batch issue**, **Product quality issue**, or **Warehouse request**.
5. Open Public > Emna > **Copy of Customer Profiles & Order Details**, Sheet 2. Record customer name, order reference, credit amount.
6. Open **Teams** → **Cancelled Orders** and send a message of partial refund. Example: "DSS166642 PARTIAL REFUND"
7. Download the Shopify refund PDF (refund_DSS<order>.pdf).
8. Send the customer the standard confirmation email and attach the refund PDF.
9. Include the "let us know which order to apply this credit to" line so the customer is prompted to claim it next time.
10. When the customer asks to apply the credit on a future order: check the tracking sheet, apply the credit in Notes, email the customer that they must pay the remaining balance only, and mark the credit as applied.

COMMON MISTAKE

Logging a refund in Shopify but skipping the tracking sheet. Untracked credits cannot be applied later — Finance has no record of them and the customer's balance can't be reconciled.

TIP

Credits are not auto-applied. The customer must mention the credit on their next order. Always include the "let us know in advance" line in the confirmation email.

SHORTCUT

Shopify refund reasons that survive an audit: "Batch issue", "Product quality issue", "Warehouse request". Avoid "refund" or "adjustment" on their own — they can't be traced.

If unsure of any step, see full SOP-CS-009.
