

Adding products to an order after placement

QUICK REFERENCE GUIDE — CUSTOMER SUCCESS · FULL SOP: SOP-CS-012

1. Copy the original order number from Shopify (e.g. **DSS166599**).
2. Confirm the order is not yet shipped or fulfilled.
3. Open **Shopify > Products > Inventory** and verify **Available** covers the requested quantity in the correct provincial variant.
4. Duplicate the original order into a new draft (preferred), or create a supplementary order with note **“COMBINE WITH DSS_____”**.
5. Rebuild the draft: original line items + the requested additions.
6. Click **Add a product**, search the product, tick the correct provincial variant, and click **Add**.
7. Confirm wholesale discounts apply, addresses match the original, and shipping is not double-charged.
8. Scroll to the bottom to verify quantities, discounts, shipping, and final total.
9. Cancel the original order (Method 1 only) and generate the new invoice.
10. Reply to the customer, restating products and quantities in writing, and attach the new invoice — double-check the attachment matches the customer.

COMMON MISTAKE

Editing the live Shopify order directly. It sometimes works, sometimes corrupts customer notifications and order history. Always rebuild as a new draft or create a supplementary order.

TIP

Newly added products appear at the bottom of the line-item list. Always scroll to confirm quantities and discounts before generating the invoice.

SHORTCUT

Restate quantities verbatim in the email — e.g. “3 packs of Skipper Ropecut added as requested”. Creates a written record and prevents disputes later.

If unsure of any step, see full SOP-CS-012.
