

Product availability inquiries from customers

QUICK REFERENCE GUIDE — CUSTOMER SUCCESS · FULL SOP: SOP-CS-013

1. Open Shopify. Navigate to **Products › Inventory**.
2. Type the product name in the Inventory search bar (e.g. **chubby gorilla**).
3. Find the customer's exact SKU and variant in the filtered list.
4. Read the **Available** column for that row.
5. If **Available** $\geq$ 1: stock is on hand. Skip to step 8.
6. If **Available** = 0: open the **Purchase orders** tab and find the expected delivery date.
7. No PO on file? Contact the supplier directly for an ETA before replying.
8. Reply to the customer in the language they wrote in — **French or English**.
9. In stock: confirm availability, invite them to place the order.
10. Out of stock: give the **confirmed** restock date, offer to follow up when it lands.
11. Phone inquiry? Same steps — pull up Inventory on screen while the customer is on the line.
12. On customer confirmation, hand off to Order Entry (new order) or Operations (restock follow-up).

COMMON MISTAKE

Replying from memory instead of opening Shopify. Inventory moves daily — promise stock you have not just verified and the order can fail to ship.

TIP

Match both size AND colour on the SKU. The Chubby Gorilla list has multiple 30 ml stubby variants (All Clear, All Black, Clear w/ Black Cap...) — wrong variant means wrong stock figure.

SHORTCUT

Filter the Inventory page by partial brand name (e.g. “chubby gorilla”) to narrow the list fast instead of scrolling through every SKU.

If unsure of any step, see full SOP-CS-013.
