

Logging customer interactions in ACT.

STANDARD OPERATING PROCEDURE — CUSTOMER SUCCESS

Document ID	SOP-CS-002
Document type	Standard Operating Procedure
Department	Customer Success
Owner	Customer Success Lead
Version	v1.0
Effective	May 2026
Status	Active

1. Purpose

ACT is the shared record of every customer touchpoint at DSS Distro. This SOP defines how Customer Success agents log calls, emails, notes, and follow-ups in ACT so that Customer Service, Account Managers, and the wider team always have an accurate picture of what was done, what was discussed, and what is outstanding for each customer.

2. Scope

Applies to all Customer Success agents and Account Managers who interact with customers by phone, email, or internal note. Covers searching for a customer, reading the customer profile, logging calls and emails, writing internal notes, setting call status, and creating follow-ups. Out of scope: ACT installation and infrastructure (handled by IT), and any customer-facing communication — ACT notes are internal only.

3. Access and setup

ACT is installed on each agent's workstation and is signed in with the agent's DSS email account, so emails sync automatically.

- If ACT does not load on the workstation, contact Étienne in IT to install or repair the application before continuing customer work.

- Do not share ACT logins between agents — each agent's email account is the link that captures their email history into the customer profile.

4. Searching for a customer

Open ACT and use the Lookup panel on the left, under **Contact Field**. Search using one of the following fields, in order of preference:

1. **Email** — the most reliable identifier. Copy the email directly from Shopify and paste it into ACT to avoid typing errors.
2. **Contact name** — use when the email is not known.
3. **Customer ID** — use when working from an order or invoice reference.
4. **Store name** — use for B2B accounts when the contact's name is unclear.

5. Reading the customer profile

Before contacting a customer, open the profile and review the existing record. The profile contains:

- Internal notes left by other team members.
- Email history synced from the agent's mailbox.
- Call history with results and durations.
- Payment follow-ups and outstanding-invoice flags.
- Shopify notes carried over from the storefront.
- Phone numbers, the assigned account manager, and the full customer history.

The History tab lists every prior interaction in date order. The Latest Activities panel on the Business Card highlights the most recent email, call attempt, and call reach so the agent can confirm current status at a glance.

History

Date	Time	Result	Regarding & Details	Agent
2026-04-07	5:32 PM	Call Completed	Suivi paiement commande du 16 mars Appel Marc-Antoine - commande du 16 mars impayee (solde du 23 mars payee). Montant communiqué. Paiement prévu demain (fin de semaine prochain). A vérifier demain.	Emma Bellaj
2026-04-06	10:10 AM	Call Completed	Follow-up on Outstanding Orders - March 16 & March 23 Called Antoine regarding his two outstanding orders dated March 16 and March 23. Informed him of the total amount due in order to release his current order placed today. Attempted to reach him by phone but was unable to connect; a voicemail was left.	Emma Bellaj
2026-03-20	1:48 PM	E-mail Sent	STLTH PRICING INCREASE & WHAT TO EXPECT Hey guys, Hope everybody's doing well! I wanted to send a quick heads-up regarding the upcoming pricing change for vape related goods for STLTH coming out of China. As of April 1st, the Chinese government will be removing a 13% Tax rebate on vape products exported out of China. Unfortunately this will result in a price increase of Chinese.	Gabriel
2026-03-16	12:18 PM	Call Completed	Follow-up Call - Payment Pending DSS156201 Called Marc-Antoine regarding the pending unpaid order DSS156201. Payment is required in order to release the new order DSS156201. There was no answer at the time of the call. Plan to call him again later this afternoon. Marc-Antoine called me back and asked for the amount of his pending order. I	Emma Bellaj

6. Reviewing context notes

Context notes summarize the substance of past interactions. A typical entry reads: “Marc-Antoine followed up regarding an outstanding payment. Customer confirmed payment would be processed.” Read the most recent context note before contacting the customer, so the conversation continues from where the last agent left off.

A good context note tells the next agent four things at a glance:

- The history of the customer relationship.
- The current payment status.
- Past interactions and who handled them.
- Any ongoing issue that is not yet resolved.

7. Emails in ACT

Emails to and from a customer are saved in ACT automatically because the agent's mailbox is linked to the system. No manual logging is required for email. To view the full thread on a customer, open the profile and click History — emails appear alongside calls and notes in date order.

8. Calls in ACT

Every call to a customer must be logged in ACT, regardless of outcome. This is non-negotiable — a call that is not logged does not exist for the rest of the team.

Logging a new call

1. From the customer profile, click **Call** in the toolbar (or use **Schedule** → **Call**) to open the Schedule Activity dialog.
2. Confirm the **Activity Type** is **Call**, set the start date and time to the actual call time, and set **Duration** to the call length (10 minutes is a sensible default for outbound payment calls).
3. Enter a short summary of the purpose in the **Regarding** field (for example, “*Follow-Up on Payment #DSS166229*”).
4. Set **Priority** to **High** for payment-related and time-sensitive calls; otherwise **Low**.
5. Click **OK** to save the activity.

Figure 2 — Schedule Activity dialog. Set Activity Type to Call, fill the start time, duration, and Regarding line, then click OK.

After the call — clearing the activity

When the call ends, open the activity from the History grid (or the Task List) and clear it. The Clear Activity dialog is where the interaction becomes a permanent record on the customer profile.

1. Set **Results** using the rules in section 9.
2. Tick **Add Activity Details to History** so the note is preserved.
3. Write the note in the Details field. Follow the format in section 10.
4. If a follow-up is required, click **Follow-up...** to schedule it (see section 11). Otherwise click **OK** to save and close.

Figure 3 — Clear Activity dialog with Result set to Call Completed and a structured note ending in an Action line that explains the follow-up required.

No-answer calls

Even if there is no answer, the call must still be recorded. Leave a voicemail if voicemail is available. Voicemails are strongly recommended even when the customer does not respond — they create a recoverable touchpoint and a clear timestamp.

9. Call status rules

Set the Result on every cleared call. The two values are not interchangeable:

RESULT	WHEN TO USE	WHAT IT SIGNALS TO THE TEAM
Call Completed	Spoke with the customer and reached a substantive outcome.	The conversation happened; read the note for the outcome.
Call attempted	No answer, voicemail, or could not connect.	The customer was not reached; another attempt is still required.

The status is what other agents see from the History grid. Misclassifying a no-answer as Call Completed hides the need for a follow-up and breaks payment-tracking and account-management workflows.

10. Writing notes

Notes can be written in English or French — use the language the conversation took place in. Customers do not see ACT notes; they are internal only.

A useful note answers, in order: who was contacted, why, what they said, and what happens next.
Example:

“Called Marc-Antoine regarding outstanding invoice. Customer advised payment will be processed by the end of the day. Customer has reached credit card limit. Order remains on hold until payment is received.”

When the outcome requires action, end the note with an explicit Action line so the next agent can act without re-reading the full thread:

“Action: Keep an eye on the order to confirm whether the payment has been received so we can mark it as paid. If it is not paid by tomorrow, follow up again.”

Short closing notes are acceptable when the matter is resolved — for example, “Customer paid his outstanding invoice” after the payment lands.

Figure 4 — Clear Activity dialog with a short closing note recorded after the customer settled their outstanding invoice.

11. Creating follow-ups

ACT generates a reminder for any follow-up scheduled on a customer. Use follow-ups whenever the customer commits to a future action (payment, callback, document return) or whenever the agent must verify an outcome by a specific date.

1. In the Clear Activity dialog, click **Follow-up...** to open a new Schedule Activity dialog pre-linked to the same customer.
2. Set **Activity Type** to **Call** (or another type if appropriate) and set the start date to the day the action is expected.
3. Enter the same **Regarding** reference as the originating activity so both items appear together in the History grid.
4. Set **Priority** using the standing rule: **High** for payments and time-critical commitments, **Low** for routine check-ins.
5. Click **OK** to save. The follow-up appears on the agent's Task List on the scheduled date.

Figure 5 — Schedule Activity dialog reached via the Follow-up button, with the same Regarding reference and a Priority value set before saving.

On the scheduled date, the follow-up appears in the Task List. Filter by

- **Tomorrow** — to see what is due the next business day.
- **Today** — to work the current day's queue.
- **All with a custom date range** — to plan the week or to catch overdue items.

Figure 6 — Task List filtered to Tomorrow showing a scheduled high-priority follow-up call; clicking the row opens the activity.

12. What ACT is for in Customer Success

For the Customer Success team, ACT serves four purposes:

- Leaving an internal trace of every customer interaction.
- Tracking communication across calls, emails, and notes in one place.
- Keeping Account Managers and other agents informed without a separate handoff.
- Documenting issues and the resolution path so the team can answer the next call without re-asking the customer.

13. Daily standards

Before closing each customer interaction, confirm:

- The note is clear and self-contained — a colleague can read it without context.
- The information is useful — substance, not just “called customer”.
- The activity is logged with the correct Result (section 9) and Regarding line.
- A follow-up is created if any next action is owed by the customer or by the agent.

Non-Compliance

Calls or emails not logged in ACT, missing or mislabelled call results, and follow-ups that are owed but not scheduled are treated as missed work. The Customer Success Lead audits the History grid and Task List weekly. Repeated lapses are addressed through the standard Customer Success performance process: a documented coaching note on first occurrence, a written warning on the second, and escalation to the department manager on the third.

If a missed log causes a customer-facing error — a duplicate call, a missed payment commitment, or a release of an order that was on hold — the agent responsible reconciles the record immediately and notifies the Customer Success Lead the same day.

Exceptions

Deviation from this SOP is approved only by the Customer Success Lead and only for the duration of a documented technical incident (for example, ACT is offline or email sync is broken). During an approved exception, agents record interactions in a temporary shared log nominated by the Lead and replay them into ACT once service is restored. The Lead records each exception, including the start and end time and the affected agents, in the Customer Success operations log.
