

Refund process for e-transfer payments converted to credit.

STANDARD OPERATING PROCEDURE — CUSTOMER SUCCESS

Document ID	SOP-CS-009
Document type	Standard Operating Procedure
Department	Customer Success
Owner	Customer Success Lead
Version	v1.0
Effective	June 2026
Status	Active

1. Purpose

This SOP defines how Customer Success processes refunds for orders originally paid by e-transfer. E-transfer payments are not refunded back to the customer as cash; instead the amount is recorded as a credit on the customer's account and applied manually to a future order. The procedure ensures the credit is documented in Shopify and in the internal tracking sheet so Finance and CS can reconcile balances accurately.

2. Scope

Applies to all Customer Success staff who handle refund requests for orders paid by Interac e-transfer. Covers credits raised for out-of-stock products, batch issues, fulfilment shortfalls, and warehouse-approved returns or adjustments. Out of scope: refunds for orders paid by credit card or Authorize.Net (refunded back to the original payment method) and overpayment credits handled directly by Finance.

3. When to issue a credit

Customer Success issues a credit on an e-transfer order when any of the following conditions apply:

- The product is out of stock or has a batch issue.
- The order cannot be fully fulfilled.

- A return or adjustment is approved by the warehouse or operations team.

Example: an order contains six bottles of Blueberry 6mg flagged with a batch issue by the warehouse. A credit equal to the value of the six bottles is required.

4. Create the refund in Shopify

Process the refund directly in the Shopify order record:

1. Open the order in Shopify using the order reference (for example, DSS166642).
2. Click **Refund / Credit** on the order page.
3. Add the affected line items, including the product name (for example, Blueberry 6mg) and the exact quantity (for example, six bottles).
4. Enter a clear refund reason in the reason field. Use one of the standard reasons below and add specifics where relevant.

Approved refund reasons

- Batch issue.
- Product quality issue.
- Warehouse request.

Reasons must be specific enough to be traced later. "Refund" or "adjustment" on their own are not acceptable.

 > DSS167082 > Refund

 Fulfilled

 Once an item is refunded, you can't start a return for it. To return an item, [create a return](#) first and then process the refund.

Reason for refund

bad batch

Only you and other staff can see this reason

Figure 2 — Always include the reason for the refund/credit.

5. Internal tracking

Every credit raised in Shopify is logged in the **Copy of Customer Profiles & Order Details** excel sheet. This can be found in Public > Emna > Copy of Customer Profiles & Order Details.

- Customer name and order reference number (for example, James Refuse DSS166642).
- Credit amount in CAD (for example, \$111.71).
- Once the credit is applied, add the order number it was applied to and amount of the order, then the remaining amount of the credit. (See Popa Vape Ontario below as an example.)

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
	Customer	Credit Amount		Remaining Amount 1		Remaining Amount 2									
1	Ontario Vape Orleans (DSS159618)	\$29.88													
2	Vape Dépot Sept-Îles	\$22.11													
3	Daniel Dugas (DSS160356)	\$37.24													
4			DSS161421		DSS161642		DSS162418		DSS162852

23	CHARLES LESPERANCE DSS165227	\$13.80													
24	MYLENE LAPOINTE DSS165015	\$34.49													
25	DSS165506 CHARLES LESPERANCE	\$50.01													
26	Arthur Cavallin DSS165326	\$73.45													
27	Chadi Dagher DSS165686	\$161.84													
28	James Dolph (discount)	\$31.97													
29	Marc Tremblay DSS166077	\$25.87													
30	Popa vape ontario DSS165706	\$347.71													
31	Ron Freiser DSS165975 (discount)	\$15.83													
32	Arthur Cavallin DSS164576 - DSS164577 - DSS164580 - DSS164581 - DSS164582 - DSS164578 - DSS164579	\$3,092.56													
33	James Refuse DSS166642	\$111.71													

Figure 3 — New credit entries are appended at the bottom; the highlighted row shows James Refuse DSS166642 at \$111.71.

The tracking sheet supports three downstream uses:

- Accounting reconciliation by Finance.
- Order tracking by Customer Success.
- Future credit reconciliation when the customer places a new order.

5.1 Notify Cancelled Orders channel in Teams

- Go to the Cancelled Orders channel in Teams. Write the order number and “partial refund”.
- Example: “DSS166642 PARTIAL REFUND”

6. Customer communication

Send the customer a confirmation email immediately after the credit is logged. Attach the Shopify refund PDF (file name format: refund_DSS<order_number>.pdf) so the customer has documented proof of the credit amount.

Standard confirmation email

Hello,

Please find attached the proof of your refund in the amount of \$<amount>. This amount has been added to your account as a credit, which you can use on your next order. A little heads-up would be much appreciated if you can let us know which order you would like to apply this credit to in the future, so we can advise the accounting team. You would then only need to pay the remaining balance.

Thank you.

Figure 4 — Customer credit confirmation email. The Shopify refund PDF is attached and the credit amount is stated in the body.

7. Important rule: customer must claim the credit

Credits are not automatically tracked or applied for future use. The customer must inform Customer Success when they want to use the credit, as Shopify will not deduct it from a new order automatically. To minimise missed credits:

- Always leave clear notes in the tracking sheet at the time the credit is raised.

- Always include the line about "let us know" in the customer confirmation email so the customer is prompted to flag the credit on their next order.

8. Applying credit to a future order

When the customer places a new order and asks to apply an existing credit:

1. Check the **Copy of Customer Profiles & Order Details** sheet to confirm the customer has available credit and note the amount.
2. Add an order note indicating the credit amount being applied and the original credit reference.
3. Advise the customer that they must pay the remaining balance only.
4. Update the tracking sheet to mark the credit as applied, including the new order reference.

Worked example

- Order total: \$100.00.
- Available credit: \$9.00.
- Customer pays: \$91.00.

The screenshot displays the order management interface for order **DSS167329**. The order status is **Fulfilled (45)**. The order date is **June 4, 2026**, and the tracking number is **520570685369**. The order details show **Mint Condition Salts 30ml by LIX** (20mg Ontario, 2402542-ON-20mg) with a unit price of **\$23.67** and a quantity of **45**, totaling **\$1,065.15**. The order is marked as **Mark as delivered**.

The **Notes** section contains a note: **** applying credit of \$1203.61 from DSS166976**. The **Additional details** section lists **Wholesale Hub discounted customer tag JUICEONTHELOOSE** and **Wholesale Hub discount source Manual Orders**.

The **Customer** section shows **Arthur Cavallin** with **433 orders**. The **Contact information** is **sudbury@juiceontheloose.ca**. The **Shipping address** is **Benjamin Evans, Juice on the Loose South End, 2152 Long Lake Road, Unit 1, Sudbury ON P3E 5H1, Canada, +1 705-222-4243**. The **Billing address** is **Same as shipping address**.

The **Metafields** section shows **No metafields pinned**. The **Blocks** section is visible at the bottom.

Figure 5 — Example of order with credit applied. Customer was advised to only pay the balance: $\$1,231.36 - \$1,203.61 = \$27.75$

9. Documentation discipline

A Shopify refund on an e-transfer order is converted into a credit. Both records must be in place for the credit to be honoured later:

- Shopify refund is logged with a specific reason on the original order.
- Tracking sheet has a row for the credit amount and order reference.
- Customer confirmation email is sent with the refund PDF attached.
- Customer is reminded to mention the credit on their next order.

Clear notes at the time of the refund prevent accounting errors and customer-facing confusion months later.

Non-Compliance

Refunds processed in Shopify without a corresponding entry in the tracking sheet are treated as untracked credits. Untracked credits cause two recurring problems: Finance cannot reconcile the customer balance at month-end, and the credit cannot be applied to a future order because there is no internal record of it. Repeat instances are escalated to the Customer Success Lead and reviewed during the monthly CS performance check-in. Refunds entered with a vague reason ("refund", "adjustment", blank) are corrected on the spot and the agent who raised them is coached.

Exceptions

A direct e-transfer refund (rather than a credit) is permitted only with prior written approval from Finance, recorded in the tracking sheet alongside the order reference. Typical grounds: the customer has explicitly closed their account, the credit amount is below the cost of a future minimum order, or the original payment was made in error. The CS agent must capture the Finance approval message (screenshot or copy of the email) in the tracking sheet row before issuing the e-transfer.
