

Adjusting mixed unit count after final mixing volume change.

STANDARD OPERATING PROCEDURE — OPERATIONS

Document ID	SOP-OPS-005
Document type	Standard Operating Procedure
Department	Operations
Owner	Mixing Operator
Version	v2.0
Effective	May 2026
Status	Active

1. Purpose

This procedure keeps the Production Plan and the Flavor Ordering workbook synchronised when the final mixed bottle count differs from the planned count. Both records must reflect the same number of units so downstream replenishment, flavouring orders, and inventory reporting stay accurate.

2. Scope

Applies to the Mixing Operator whenever the final produced bottle count differs from the planned count after mixing is complete. Triggers include volume adjustments, flavour corrections, ingredient variances, and any other factor that changes the final mixed volume. Out of scope: planned-count changes made before mixing begins, which are handled by the standard production planning process.

3. When to run this procedure

Run this procedure immediately after final mixing whenever the produced unit count differs from the planned count for any of the following reasons:

- Volume adjustments during mixing.
- Flavour corrections that change the final yield.
- Ingredient variances that increase or reduce output.

- Any other factor that changes the final mixed volume.

Both workbooks must be updated in the same session. Do not defer the Flavor Ordering update to a later shift — a partial update leaves the two files out of sync and corrupts the next ordering cycle.

4. Files involved

- **Production Plan:** P:_Pamela\Stock Replenishment\1 - Production Plan - Automation\ — open the current Production Plan workbook (example: *Jan 1st PRODUCTION PLAN Final version 2.0.xlsm*).
- **Flavor Ordering:** P:_Pamela\Order Flavours\2026\[Month Number] - [Month Name]\ — a new file is created each month; always open the most recent file in the current month's folder.

5. Step-by-step procedure

Step 1 — Open the Production Plan

1. Navigate to P:_Pamela\Stock Replenishment\1 - Production Plan - Automation\.
2. Open the current Production Plan workbook, for example *Jan 1st PRODUCTION PLAN Final version 2.0.xlsm*.

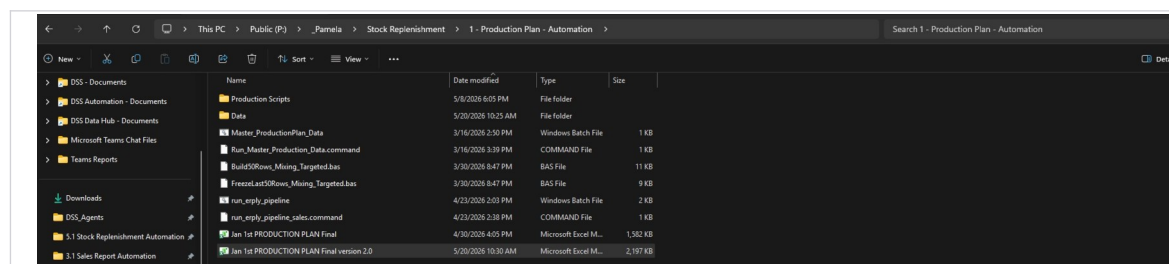

Figure 1 — Production Plan folder on the P: drive with the current workbook selected.

Step 2 — Filter by product name

3. Click the filter arrow on column O — “Product”.
4. Search for and select the product being adjusted, then apply the filter.

Figure 3 — Production Plan with the product filter applied, showing only the matching rows.

Step 3 — Confirm the correct row

5. Scroll right to column AP — “Mixing Date”.
6. Verify the date matches today’s mixing date to confirm you are editing the right row.

AO	AP	AQ	AR	AS	AT	AU	AV	AW	AX	AY	AZ	BA	BB	BC	BD
Mixing (50)	Freeze & Clear	Production Planning	Unfinished Planning	Clear Filters											
or Checker	Mixing Date	Mixed UNITS	Planned Date	Bottling	Bottled Units	Label	CA Labelled Unit	ON Labelled Unit	QC Labelled Unit	AB Labelled Unit	MB Labelled Unit	NB Labelled Unit	PEI Labelled Unit	NS Labelled Unit	Unstamped
	5/20/2026	50	5/20/2026	yes	50	some			12						

Figure 4 — Columns AP (Mixing Date) and AQ (Mixed UNITS) in the Production Plan.

Step 4 — Update Mixed Units

7. In column AQ — “Mixed UNITS”, click the cell in the confirmed row and enter the new unit count.

8. Do not close the Production Plan. Keep it open and move to Step 5.

AO	AP	AQ	AR	AS	AT	AU	AV	AW	AX	AY	AZ	BA	BB	BC	BD
Mixing (50)	Freeze & Clear	Production Planning													
or Checker	Mixing Date	Mixed UNITS	Planned Date	Bottling	Bottled Units	Label	CA Labelle	ON Labelle	QC Labelle	AB Labelle	MB Labelle	NB Labelle	PEI Labelle	NS Labelle	Unstamped
	5/20/2026	100	5/20/2026	yes	50	some			12						

Figure 5 — Mixed UNITS in column AQ updated to the new count (example: 100).

Step 5 — Open the Flavor Ordering file

9. Navigate to the current month's folder P:_Pamela\Order Flavoursing\2026\[Month Number] - [Month Name].
10. Open the most recent file in that folder (example for May: P:_Pamela\Order Flavoursing\2026\5 - May\Flavor Ordering - April 30th.xlsx).

Note: a new file is created each month — always open the most recent file in the current month's folder.

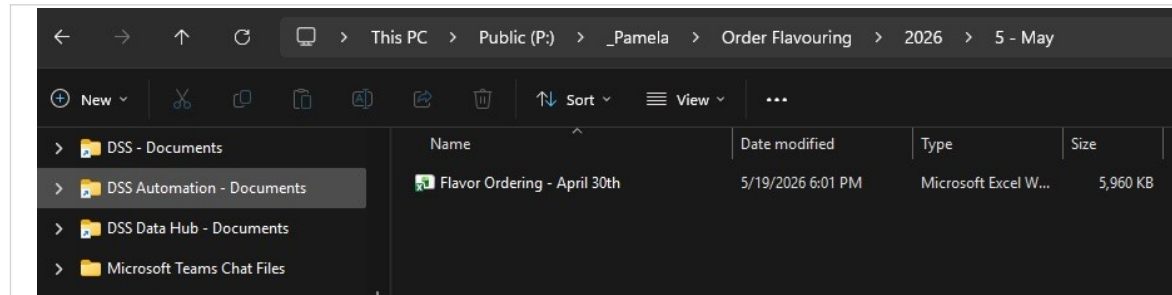

Figure 6 — Current month's Order Flavoursing folder with the most recent file shown.

Step 6 — Keep both files open at the same time

11. Both the Production Plan and the Flavor Ordering file must be open simultaneously.
12. These files are sometimes synchronised. If the sync is active, the Flavor Ordering file may update automatically once the change in Step 4 has been made.

Figure 7 — Production Plan and Flavor Ordering file open side by side.

Step 7 — Go to the Mixing tab

13. In the Flavor Ordering file, click the **Mixing** tab at the bottom of the screen.

Figure 9 — Mixing tab with the matching row located and the current Qty in column E.

Step 9 — Update Qty (if needed)

15. Check column E — “Qty” on the located row.
16. If the file is synchronised: the value may have already updated automatically — verify it matches the new unit count and no further action is required.
17. If the sync is off: click the cell in column E and manually enter the new quantity to match the value entered in Step 4.

Figure 10 — Qty in column E updated to match the new Mixed UNITS value from Step 4.

6. After completion

- Save both workbooks before closing them.
- Confirm the Mixed UNITS value in the Production Plan (column AQ) matches the Qty value in the Flavor Ordering Mixing tab (column E) on the corresponding row.
- Close both files once values are confirmed in sync.

Non-Compliance

Updating only one of the two workbooks leaves the Production Plan and Flavor Ordering records out of sync. The next flavouring order will be sized against the wrong unit count, producing either a stock shortage or surplus and a manual reconciliation task for the Operations Manager. Repeated failures to update both files in the same session are escalated to the Operations Manager for retraining.

Exceptions

If the Flavor Ordering file cannot be opened in the same session (file lock, network outage, or the workbook is being edited by another user), the Mixing Operator notifies the Operations Manager immediately. The Operations Manager records the deferred update in the daily handover note and

completes the Flavor Ordering edit before the start of the next mixing shift. No other deviations from this procedure are permitted without written approval from the Operations Manager.
