

Shopify to continue or deny inventory updates.

STANDARD OPERATING PROCEDURE — OPERATIONS

Document ID	SOP-OPS-006
Document type	Standard Operating Procedure
Department	Operations
Owner	Operations Manager
Version	v1.0
Effective	June 2026
Status	Active

1. Purpose

This procedure updates Shopify product availability based on the latest warehouse and unfinished inventory levels. The process determines whether each product continues selling when inventory reaches zero or whether Shopify denies further sales until stock becomes available again.

The procedure runs end-to-end without manual judgement once the input files are refreshed. Incorrect inventory settings cause customers to purchase products that are not available, or block customers from ordering products that should remain available — both outcomes generate refund work and reputational damage.

2. Scope

This SOP applies to any DSS employee responsible for maintaining Shopify inventory settings. The procedure runs whenever Shopify availability requires updating, and as part of the regular website maintenance routine.

Out of scope: product creation, pricing changes, image updates, and Shopify catalogue restructuring. Those follow separate procedures.

3. Required files and access

Before starting, confirm access to the three files below. All paths are on the P: drive and require Operations team permissions.

FILE	PATH	PURPOSE
Warehouse Inventory	P:\- Power BI\1 -Data Base\Back on Stock\Warehouse Inventory.csv	Main warehouse stock counts
Unfinished Inventory	P:_Pamela\Stock Replenishment\1 - Production Plan - Automation\Data\Unfinished inventory.csv	Work-in-progress stock counts
Automation Workbook	P:\- DSS Tools\2. Website Inventory Update (Shopify)\2.1 Shopify Inventory Tools\2.1.1 Continue or Deny Shopify Automation\Shopify - Continue Or Deny MSTR File Automation.xlsm	Generates the Shopify import file

4. Procedure

Step 1 — Update the warehouse inventory file

1. Open the **Stock Replenishment** report.
2. Set **Location = Warehouse** and generate the report.
3. Once the report finishes, save the file and overwrite the existing **Warehouse Inventory.csv** at the path listed in Section 3.

Expected result: Warehouse Inventory.csv now contains the latest warehouse quantities.

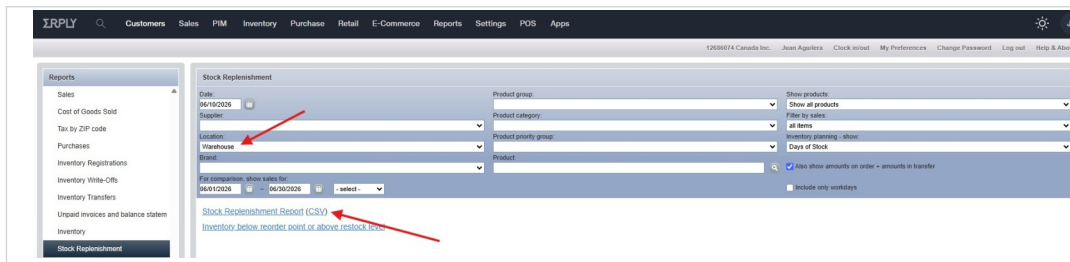

Figure 1 — Stock Replenishment report with Location set to Warehouse.

Step 2 — Update the unfinished inventory file

4. Open the same **Stock Replenishment** report.
5. Set **Location = Unfinished Warehouse** and generate the report.
6. Save the file and overwrite the existing **Unfinished inventory.csv** at the path listed in Section 3.

Expected result: Unfinished inventory.csv now contains the latest unfinished stock quantities.

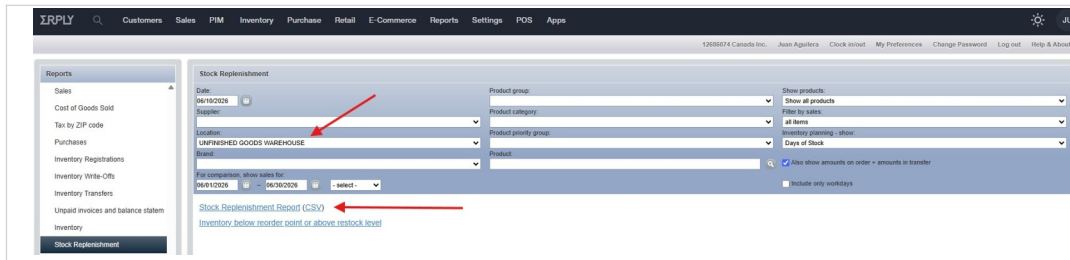

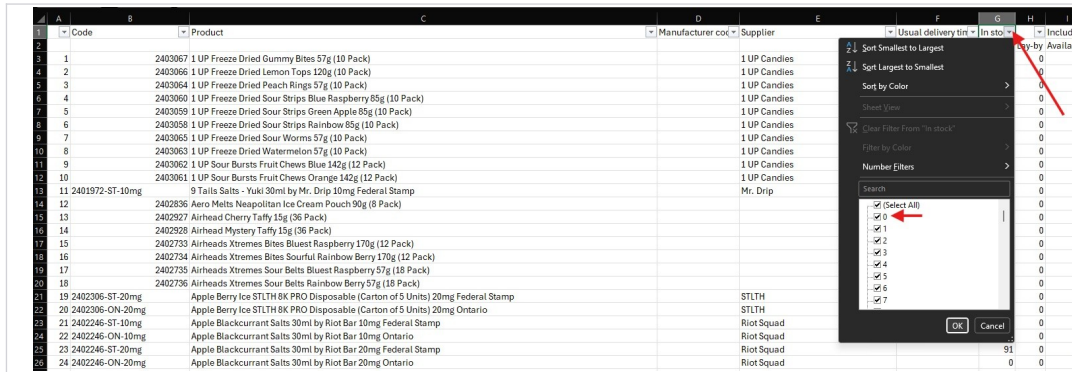

Figure 2 — Stock Replenishment report with Location set to Unfinished Warehouse.

Step 3 — Validate inventory data

7. Open **Unfinished inventory.csv** in Excel.
8. Review the **In Stock** column and confirm no products have negative inventory values.
9. If negative values exist, stop the process and investigate before continuing.

Expected result: all inventory quantities are valid and no negative values exist.

A	B	C	D	E	F	G	H	I
Code	Product	Manufacturer code	Supplier	Usual delivery time	In stock	by	Available	
1	2403067 1 UP Freeze Dried Gummy Bites 57g (10 Pack)		1 UP Candies		0

Figure 3 — Unfinished inventory In Stock column under review.

Step 4 — Export products from Shopify

10. Log in to the Shopify Admin portal.
11. Navigate to **Products** → **Export**.
12. Select **All products** and start the export. Shopify sends the file by email when ready.

Expected result: a complete Shopify product export is available for download by email.

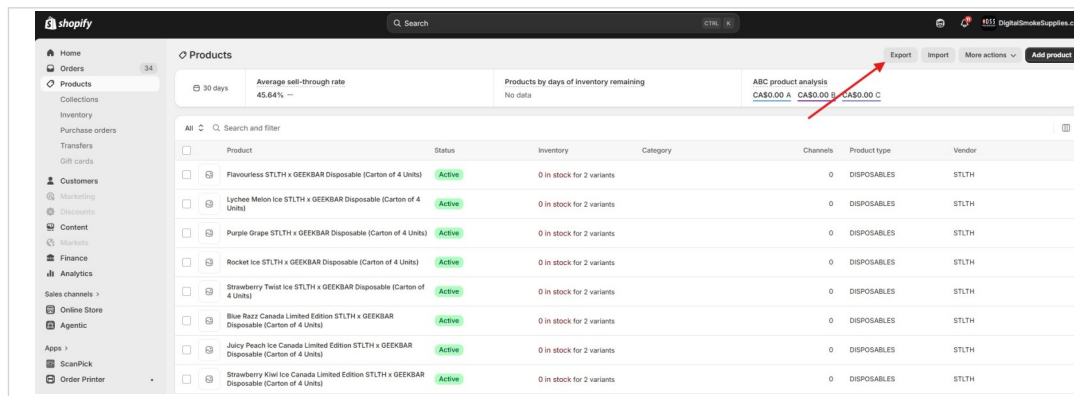

Figure 4 — Shopify Products page with Export selected.

Step 5 — Download and prepare the Shopify export

13. Open the export email from Shopify and download the file.

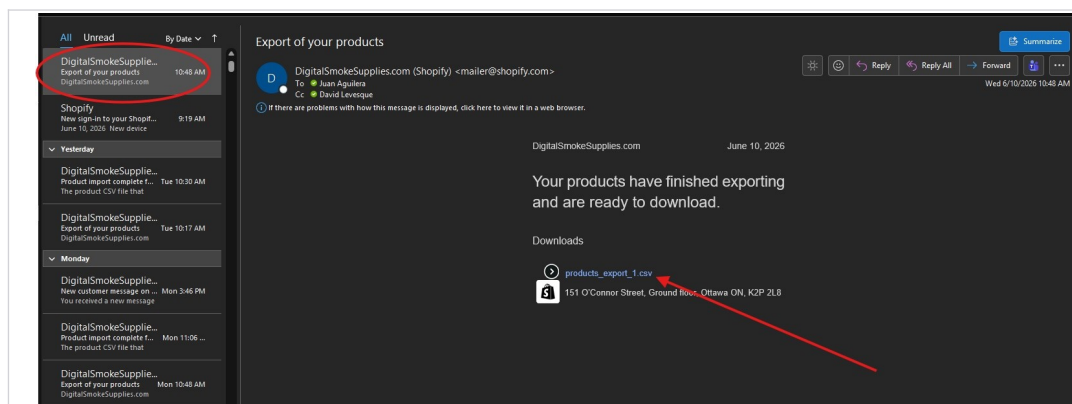

Figure 5 — Shopify export email with download link.

14. Open the exported CSV in Excel and delete the following columns:

- AV — Included / Canada
- AW — Price / Canada
- AX — Compare At Price / Canada

15. Save and overwrite the original export file.

Expected result: the Shopify export is cleaned and ready for the automation.

AU	AV	AW	AX	AY
a Cost per item	Included / Canada	Price / Canada	Compare At Price / Canada	Status
	TRUE			active
	TRUE			active
	TRUE			active

Figure 6 — Columns AV, AW, and AX selected for deletion.

Step 6 — Open the Continue or Deny automation

16. Navigate to P:\- DSS Tools\2. Website Inventory Update (Shopify)\2.1 Shopify Inventory Tools\2.1.1 Continue or Deny Shopify Automation.
17. Open **Shopify - Continue Or Deny MSTR File Automation.xlsx**.
18. Allow the workbook to fully load before continuing.

Expected result: the automation workbook is open and ready to refresh.

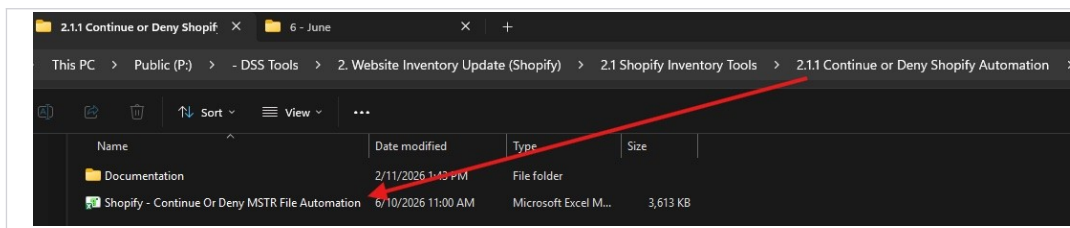

Figure 7 — Continue or Deny automation workbook opened.

Step 7 — Refresh the automation data

19. Run a data refresh on the workbook and wait until all queries finish.
20. Run a **second** refresh after the first completes.

⚠ Do not interrupt the refresh

Do not use the computer while the refresh is running. Switching windows, opening files, or cancelling the refresh produces incomplete or incorrect data that corrupts the Shopify import.

Expected result: all data sources are refreshed with the latest inventory information.

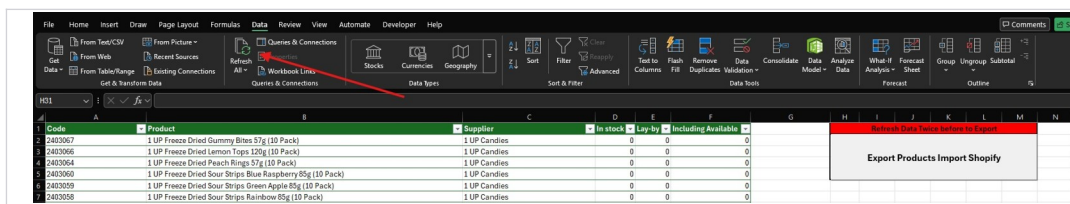

Figure 8 — Refresh All running in the automation workbook.

Step 8 — Generate the Shopify import file

21. Run the macro **Export Products Import Shopify**.
22. The macro processes the inventory information and creates the Shopify import file in the Daily Upload folder.

Expected result: a new Shopify import file is generated in the Daily Upload folder.

Code	Product	Supplier	In stock	Lay-by	Including Available	
2403067	1 UP Freeze Dried Gummy Bites 57g (10 Pack)	1 UP Candies	0	0	0	
2403066	1 UP Freeze Dried Lemon Tops 120g (10 Pack)	1 UP Candies	0	0	0	
2403064	1 UP Freeze Dried Peach Rings 57g (10 Pack)	1 UP Candies	0	0	0	
2403060	1 UP Freeze Dried Sour Strips Blue Raspberry 85g (10 Pack)	1 UP Candies	0	0	0	
2403059	1 UP Freeze Dried Sour Strips Green Apple 85g (10 Pack)	1 UP Candies	0	0	0	
2403058	1 UP Freeze Dried Sour Strips Rainbow 85g (10 Pack)	1 UP Candies	0	0	0	
2403065	1 UP Freeze Dried Sour Worms 57g (10 Pack)	1 UP Candies	0	0	0	
2403063	1 UP Freeze Dried Watermelon 57g (10 Pack)	1 UP Candies	0	0	0	
2403062	1 UP Sour Bursts Fruit Chews Blue 142g (12 Pack)	1 UP Candies	0	0	0	
2403061	1 UP Sour Bursts Fruit Chews Orange 142g (12 Pack)	1 UP Candies	0	0	0	

Figure 9 — Macros dialog with Export Products Import Shopify selected.

Step 9 — Import the file into Shopify

23. In Shopify, navigate to **Products** → **Import**.

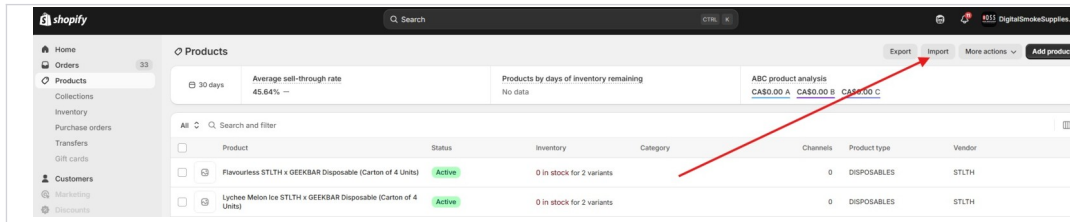

Figure 10 — Shopify Products page with Import selected.

24. Browse to the latest generated file and select it. Example: **P:_Pamela\Unfinished Upload\Daily upload\products_export_1 June 10 2026.csv**.

Expected result: the file is loaded into Shopify and ready for import.

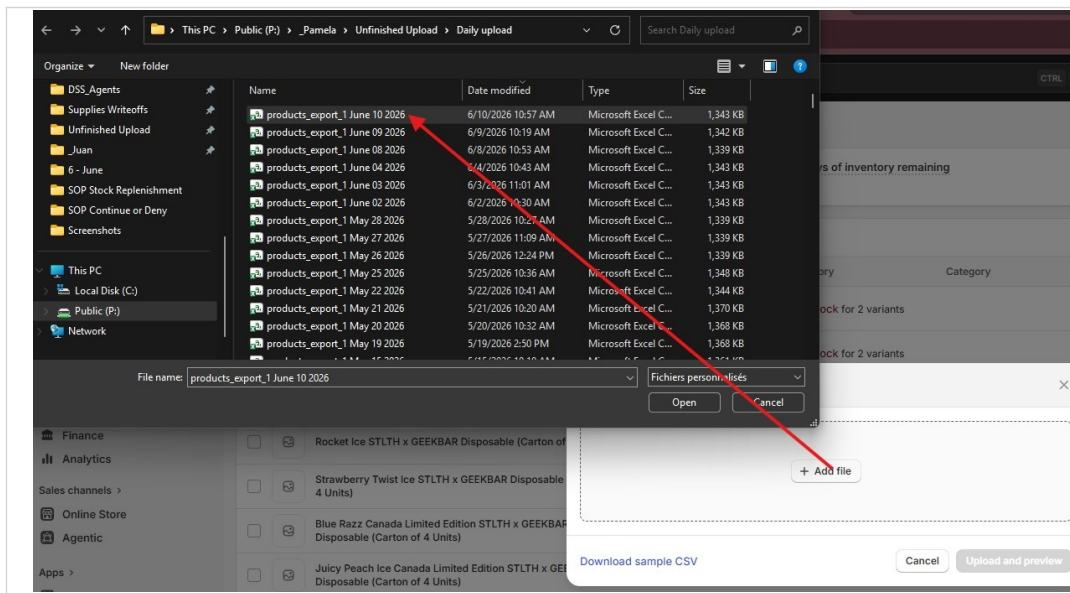

Figure 11 — Generated products_export file selected for import.

Step 10 — Verify import settings

Before starting the import, Shopify displays import options. Set them exactly as shown — these settings are required for the inventory update to behave correctly.

- **Check the first option.**
- **Uncheck the second option.**

Expected result: import settings match DSS standards.

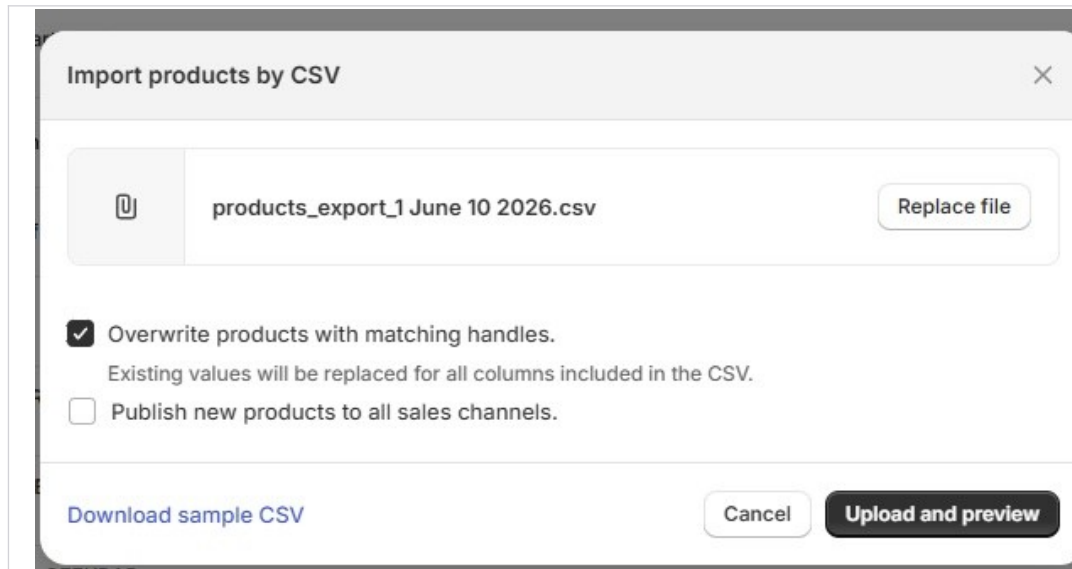

Figure 12 — Shopify import settings dialog with required options.

Step 11 — Run the import

- 25.** Click **Import products** and allow Shopify to process the file.
 - 26.** Do not close the browser until Shopify confirms the import has completed successfully.
- Expected result: the inventory availability updates are applied to Shopify.

Preview your first product

 You're importing a file into Shopify. If this preview doesn't look right, you can try to [change the order of column headings](#)

You will be importing approximately **936 products** with a total of **3,968 SKUs** and **830 images**. Importing will **overwrite any existing products** that have the same product handle and will **publish only to the Online Store**.

Import products

Figure 13 — Shopify confirmation that the import has completed.

Step 12 — Perform verification import

- 27.** Run the **exact same import** a second time.
- 28.** Confirm that Shopify reports no errors and that all product updates were applied during the first import.

Expected result: Shopify completes the second import successfully and reports no errors.

5. Completion checklist

Before closing the procedure, confirm every item below is complete:

- Warehouse inventory file updated.
- Unfinished inventory file updated.
- No negative inventory values found.
- Shopify export downloaded.
- Required columns removed from the export.
- Automation workbook refreshed twice.
- Export Products Import Shopify macro completed.
- First Shopify import completed without errors.
- Verification import completed without errors.

Non-Compliance

Skipping the inventory validation step results in negative quantities being pushed to Shopify, which silently disables products that should remain available. Customers cannot order, and the team only discovers the problem when sales drop. Affected SKUs must be re-enabled manually.

Interrupting the workbook refresh produces partial data. The generated import file then sets the wrong continue / deny state on an unpredictable subset of products, which requires a full re-run of the procedure to correct.

Skipping the second verification import allows silent partial-import failures to ship to production. Any product whose update did not apply behaves incorrectly on the storefront until the next run.

Exceptions

Deviation from this procedure requires written approval from the Operations Manager before the import is executed. The approval, the reason, and the SKUs or settings affected are recorded in the Operations log alongside the run date.

Emergency Shopify availability changes outside this procedure (for example, immediately disabling a recalled product) follow the incident-response flow and are reconciled at the next scheduled run of this SOP.
