

Update sales dashboards (DSS / FLVRS / ACT)

QUICK REFERENCE GUIDE — SALES · FULL SOP: SOP-SALES-003

1. Run Run_Sales_Reports_Data_Extraction.bat from P:\- DSS Tools\3. Sales & Reporting\3.1 Sales Report Automation.
2. Open Sales_Report.xlsm → Data → Refresh All.
3. Review **SKUs for Update** and **FLVRS Checker** tabs; resolve flagged items.
4. Update supporting databases if needed: Taxes, Cost, Customer DB, Product Category.
5. Clean the FLVRS weekly sales report — remove retail transactions.
6. Run **DSS – Update Sales Dashboard**, then **DSS – Update Orders Dashboard**.
7. Run **FLVRS – Update Sales Dashboard**, then **FLVRS – Update Orders Dashboard**.
8. Run **ACT – Update Data Dashboard**.
9. Open Missing_Opportunities.xlsm; if new entries, run **Feed_BackOrders**.
10. Open Back_to_Stock_Automation.xlsm, refresh all, run **Append_BackInStock_Log**.
11. Open Dashboard_2025.pbix → Home → Refresh. Wait for every query to finish.
12. Click Publish, select the correct workspace, Replace the existing dataset, confirm success.

COMMON MISTAKE

Publishing before refreshing, or leaving FLVRS retail transactions in the data. Both ship wrong numbers to stakeholders.

TIP

Run the macros in order and wait for each to finish. Dashboards reconcile only when every step completes against the same extract.

SHORTCUT

All Excel macros live on the ribbon of Sales_Report.xlsm — keep that workbook open between steps 2 and 8 instead of relaunching.

If unsure of any step, see full SOP-SALES-003.
