

Stock replenishment process.

STANDARD OPERATING PROCEDURE — OPERATIONS

Document ID	SOP-OPS-006
Document type	Standard Operating Procedure
Department	Operations
Owner	Operations Lead
Version	v1.0
Effective	June 2026
Status	Draft — Pending review

1. Purpose

This procedure explains how to execute the complete Stock Replenishment process, from purchase extraction through ERPLY import. Following it ensures replenishment quantities are accurately entered, purchase returns are generated correctly, and inventory orders are successfully imported into ERPLY.

2. Scope

This SOP applies to any DSS employee responsible for generating Stock Replenishment purchase returns. It covers the full weekly cycle from extracting purchasing data to verifying imported purchase returns inside ERPLY. Tasks performed outside the Stock Replenishment Automation workbook — such as supplier negotiation, freight booking, or receiving — are out of scope.

3. Required files

The replenishment cycle depends on four files located on the P: drive. Verify each path before starting.

FILE	LOCATION
Purchase Extraction Script	P:\DSS Tools\5. Stock Replenishment System\5.1 Stock Replenishment Automation\RunPurchaseExtraction.bat
Stock Replenishment Automation	P:\DSS Tools\5. Stock Replenishment System\5.1 Stock Replenishment Automation\Replenishment Automation.xlsm
Weekly Stock Replenishment files	P:_Pamela\Replenishment\2026\<Year>\<Month>\<Week>\

ERPLY Import Script

P:\DSS Tools\5. Stock Replenishment System\5.1 Stock Replenishment Automation\Erply_Import_PurchaseReturn.py

4. Procedure

Step 1 — Run purchase extraction

Navigate to the Stock Replenishment Automation folder and run the extraction batch script.

Folder: P:\DSS Tools\5. Stock Replenishment System\5.1 Stock Replenishment Automation

Run: RunPurchaseExtraction.bat

Figure 1 — RunPurchaseExtraction.bat launched from the Stock Replenishment Automation folder.

When prompted, enter yesterday's date as the extraction date.

Figure 2 — Console prompt requesting the extraction date.

Allow the extraction process to complete before proceeding to Step 2.

Expected result — the latest purchasing and inventory information has been extracted and is ready for use in the replenishment process.

Step 2 — Open Stock Replenishment Automation

Open the automation workbook from the same folder.

File: Replenishment Automation.xlsm

Figure 3 — Stock Replenishment Automation workbook opened in Excel.

Once the workbook is open, select Data → Refresh All and allow every query to finish refreshing. Save the workbook when the refresh completes.

Figure 4 — Data → Refresh All in the automation workbook ribbon.

Expected result — the automation workbook is updated with the latest extracted data and is ready for replenishment processing.

Step 3 — Open the weekly Stock Replenishment file

Navigate to the replenishment archive and open the file for the current cycle.

Folder: P:_Pamela\Replenishment\2026\<Year>\<Month>\<Week>\

Figure 5 — Year / Month / Week folder structure under P:_Pamela\Replenishment.

Open the weekly Stock Replenishment file inside that folder.

Figure 6 — Weekly Stock Replenishment file ready for quantity entry.

Expected result — the weekly Stock Replenishment file is ready for quantity entry.

Step 4 — Enter replenishment quantities

Using the Stock Replenishment papers, enter all required replenishment quantities into the weekly file.

Figure 7 — Replenishment quantities entered against the source paperwork.

Review all entries carefully before proceeding. Verify that:

- Quantities match the paperwork.
- No rows were skipped.
- No quantities were entered in the wrong location.

Save the file after completing all entries.

Expected result — the weekly Stock Replenishment file contains all replenishment quantities required for the current purchasing cycle.

Step 5 — Review Add-On products

Review the Add-On products listed on the final page of the Stock Replenishment paperwork. These products are not always included automatically and must be reviewed separately.

Figure 8 — Add-On product list on the final page of the paperwork.

Locate each Add-On product within the weekly Stock Replenishment file.

Figure 10 — Add-On product quantities entered into the weekly file.

Expected result — all required Add-On products have been included in the replenishment process.

Step 6 — Refresh and validate the weekly file

After all quantities and Add-On products have been entered, perform one final refresh by selecting Data → Refresh All. Allow every query to finish loading.

Review the file and confirm:

- Replenishment quantities were entered correctly.
- Add-On products were included.
- No unexpected errors appear.
- All calculations update successfully.

Expected result — the weekly Stock Replenishment file is finalised and ready for processing.

Step 7 — Validate province assignments

Before generating purchase returns, verify that all province assignments are correct.

Figure 12 — Correcting an incorrect province assignment.

⚠ Important

Do not continue until every province assignment has been validated. Incorrect province assignments produce incorrect purchasing and inventory allocations. If a correction is needed, fix the assignment and refresh the Stock Replenishment file again before proceeding.

Expected result — all products are assigned to the correct province.

Step 8 — Run the Extract macro

Return to Replenishment Automation.xlsm and locate the Extract button.

Figure 13 — Extract button on the Stock Replenishment Automation workbook.

Click Extract. When prompted, browse to and select the weekly Stock Replenishment file completed in Steps 3–7. Wait for the extraction to finish.

Expected result — all replenishment quantities are loaded into the Purchase Return Generator.

Step 9 — Run the Generate macro

Once the extraction is complete, locate and run the Generate macro. Allow the macro to finish processing.

Figure 14 — Generate macro creating the purchase return records.

This step creates the purchase return records required for ordering.

Expected result — purchase returns are generated and ready for review.

Step 10 — Review generated purchase returns

Review the generated purchase returns carefully before exporting. Verify:

- Product quantities.
- Product costs.
- Supplier assignments.
- Province assignments.
- Purchase return totals.

code	EAN	amount	price	discount%
2400630-S Skipper 30		-80	9.26	0
2401109-S Menthol Ic		-33	12.11	0
2402560-S Pineapple		-30	8.66	0
2401481-S Original 6		-20	14.6515	0
2401988-S Red Berrie		-20	8.7	0
2402560-S Pineapple		-15	9.46	0
2401109-S Menthol Ic		-10	11.98	0
2401802-S Nebula 60		-10	12.52	0
2402543-S Flavoured		-8	12.08	0
2402558-S Mango Sa		-7	9.17	0
2402069-S Blue Berrie		-5	8.7	0
2401481-S Original 6		-5	14.3936	0
2400564-S Plain Jane		-5	8.44	0
1021100-S Tobacco L		-5	17.05	0
2401102-S Watermel		-4	12.24	0

Figure 15 — Cost / price validation on the generated purchase returns.

If any discrepancies are identified, correct them before proceeding.

Expected result — all generated purchase returns are accurate and ready for export.

Step 11 — Compare totals

Review the Summary sheet totals and compare them against the Label-only totals generated by the automation.

Source Invoice	Date	Total Returned Amount
Purchase Invoice Ontario	6/9/2026	-257
Purchase Invoice Quebec	6/9/2026	-772
Purchase Invoice Federal	6/9/2026	-368
Purchase Invoice Manitoba	6/9/2026	-10
Purchase Invoice Alberta	6/9/2026	-38

Figure 16 — Summary totals compared against Label-only totals.

The totals should match. If differences exist, investigate and resolve them before continuing.

Expected result — Summary totals and Label-only totals match.

Step 12 — Run the Export macro

Once validation is complete, run the Export macro. Allow the export to finish completely.

Date	Source Invoice	Code	Product Name	Total Quantity	Match Status	Source Invoice	Extract	Generate	Export	Delete

Figure 17 — Export macro creating the ERPLY import files.

The export generates the files required for the ERPLY import in Step 14.

Expected result — purchase return import files are successfully created.

Step 13 — Run the Delete macro

After confirming the export completed successfully, run the Delete macro.

Date	Source Invoice	Code	Product Name	Total Quantity	Match Status	Source Invoice	Extract	Generate	Export	Delete
2026/06/09	Purchase Invoice Ontario	2401481-ON-0940	Original 60ml by Don Crato 6mg	40	OK	Purchase Invoice Alberta

Figure 18 — Delete macro clearing temporary processing data.

This removes temporary processing data and prepares the workbook for the next replenishment cycle.

Expected result — temporary processing data has been cleared successfully.

Step 14 — Import purchase returns into ERPLY

Navigate back to the Stock Replenishment Automation folder and run the import script.

Run: Erply_Import_PurchaseReturn.py

Allow the script to complete. Monitor the console window during the import and review any warnings or errors before closing the script.

Expected result — purchase returns are imported into ERPLY successfully.

Step 15 — Final verification

Log into ERPLY and verify that:

- Purchase returns were created successfully.
- Quantities match the generated files.
- Suppliers are assigned correctly.
- No products are missing.
- No import errors occurred.

Our no.	Store	Type	Supplier's no.	Date	Deadline	Supplier	Total	State	Confirmed	Paid	More
11895	UNFINISHED GOODS WAREHOUSE	Purchase return	RETURN TO LABELSTAMP JUNE 9 QC	06/19/2026	06/19/2026	12686974 Canada Inc.	-4,587.96 CHD	confirmed	yes		More

Figure 19 — ERPLY purchase return verification screen.

Once verification is complete, the Stock Replenishment process is finished.

Expected result — the replenishment cycle is closed and ready to repeat next week.

5. Troubleshooting

Province validation errors

If products appear under the wrong province:

1. Stop the process — do not continue with the Extract macro.
2. Correct the province assignment on the weekly file.
3. Refresh the file (Data → Refresh All).
4. Regenerate the purchase returns from Step 8 onwards.

Purchase return totals do not match

If Summary totals and Label-only totals do not match:

1. Review recently entered quantities for typos and misplaced rows.
2. Verify Add-On products were entered correctly.
3. Run the Generate macro again.
4. Recheck the Summary vs. Label-only totals.

ERPLY import errors

If the import script reports errors:

1. Review the error message in the console window.
2. Correct the affected records on the weekly file.
3. Re-run the Export macro to regenerate the import file.

4. Run the import script again and confirm a clean console.

6. Completion checklist

Before closing the cycle, confirm every item below.

- ☐ Purchase extraction completed.
- ☐ Stock Replenishment Automation refreshed.
- ☐ Weekly replenishment file updated.
- ☐ Replenishment quantities entered.
- ☐ Add-On products reviewed.
- ☐ Province mappings validated.
- ☐ Purchase returns generated.
- ☐ Totals verified.
- ☐ Export completed.
- ☐ Delete macro completed.
- ☐ ERPLY import completed.
- ☐ Purchase returns verified in ERPLY.

Non-Compliance

Skipping or rushing any step in this procedure produces measurable harm to the business. Specific consequences:

- Skipping the province validation in Step 7 routes purchase returns to the wrong warehouse and forces a manual unwind on the ERPLY side, delaying the next week's order.
- Skipping the Summary vs. Label-only comparison in Step 11 ships incorrect quantities to suppliers and produces inventory variance at receiving.
- Running the ERPLY import without first running the Delete macro in Step 13 contaminates the next cycle with stale data and can cause duplicate purchase returns.
- Closing the script in Step 14 without reading the console window hides import errors and leaves missing purchase returns undetected until receiving.

Repeated non-compliance is escalated to the Operations Manager and the owning employee is required to re-run the affected cycle on personal time.

Exceptions

Deviations from this SOP require advance approval from the Operations Manager. The two recognised deviations are:

- Running a partial cycle (e.g. urgent single-supplier replenishment) outside the weekly schedule. The Operations Manager approves in writing, and the cycle is still validated against Steps 7, 10, 11, and 15.
- Using an older extraction date when the current day's data is unavailable. The Operations Manager records the substitution in the cycle's log entry before proceeding.

All exceptions are logged in the weekly cycle folder under P:

_Pamela\Replenishment\2026\<Year>\<Month>\<Week>\exceptions.txt with the date, approver, and reason.
